Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that the enterprises corresponding in different locations in figure 1 in Williums's reference are not the different enterprises, rather than it is just one enterprise located in different locations. Applicant spent lots of writings to establish this argument. Examiner could not understand why it is difficult to understand that this figure actually showing different organizations or enterprises in different locations not just one single enterprise. Examiner bolt the cited part in the final action to clearly shows to the applicant that this figure consists of different enterprises. According to figure 1, the audit servers 12 are configured to provide DPF (Dynamic Packet Filter) and DPF provides a firewall between the enterprise LAN/WAN. Accordingly, It is very clear for the figure that all theses enterprises located in NYC, Chicago, and London has its own audit servers consists with DPF. So, it is not very difficult to understand that these enterprises are separated by locations because all of them have DPF and audit servers, not just one enterprise in different locations. According to the all independent claims, a second result comprising security standard applicable to the enterprise under audit and one or more other enterprises that together from a relevant group, and information derived from information previously obtained through application of the collecting and analyzing steps to two or more enterprises in the relevant per group. This limitation already shown in the previous actions. .
